

PrestaShop 1.6, 1.7, 8.xx supported

Out of Stock Notification

v1.0.0

Overview

This guide is intended for all users of this PrestaShop module, such as managers and supervisors. It includes detailed, step-by-step instructions to help you install the module in PrestaShop.

Goals

1. **Install the module on PrestaShop**
2. **Configure the module as intended**

Specifications

This useful module allows you to get most of your customers by encouraging them to subscribe for out of stock product(s) so they are not disappointed if a product they like is not in stock. An automated email is sent after the product is back in stock so they can purchase them.

Installation Guide

Access the Module Installation:

- Log in to your PrestaShop administration panel.
- Navigate to "Modules" and select "Module Manager."
- Click the "Upload a module" button.

Upload the Module:

- Choose the downloaded module file, "outofstocknotification.zip," and upload it.

Install the Module:

- Locate the "Out of Stock Notification" module in the module list.
- Click the "Install" button.

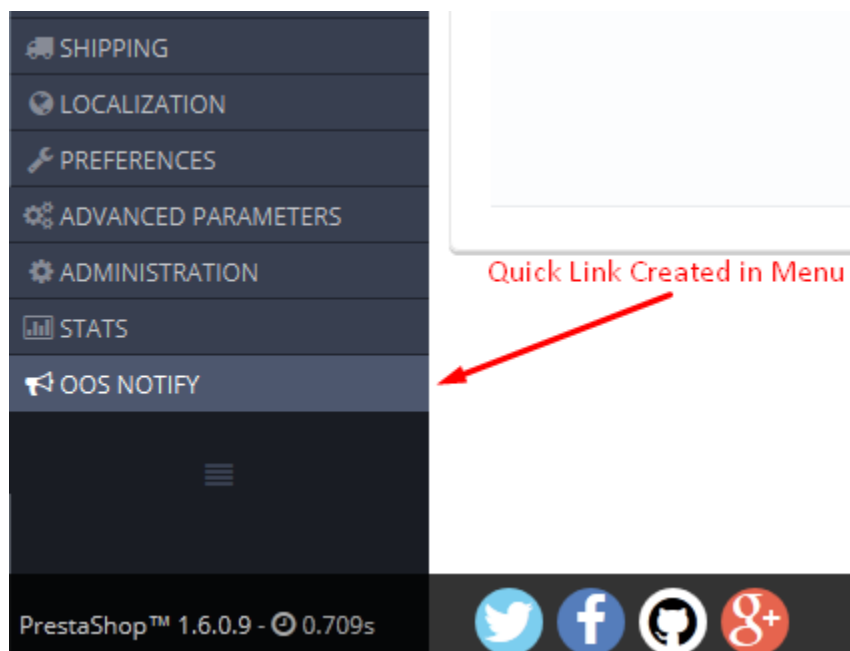

Clear PrestaShop Cache:

- Go to "Advanced Parameters" → "Performance."
- Click the "Clear cache" button.

User Guide

1: How to configure the module:

The module creates a new left menu block on installation, simply click the left menu link and you will see the list of all subscribers.

2: How to configure the module - Next Step:

The module will show up on any out of stock item without any extra configuration.

Support

If you require additional information, have any questions, or encounter problems, please open a support ticket. Our technicians are ready to assist you.

Customization

If your needs require custom functionality not included in our module, our support can assist with customization requests.
